SUMMARY

Seasoned Fullstack Engineer with a robust 7-year track record of mastery in JavaScript and React, fortified by a solid foundation in Product Design. Adept at crafting flawless and user-centric web interfaces, I bring to the table a distinctive fusion of technical prowess and design finesse, culminating in the delivery of unparalleled user experiences. My multidimensional skill set enables me to excel in both the frontend and backend realms, ensuring holistic and seamless development from conception to deployment.

EDUCATION

New Jersey Institute of Technology   Sept. 2009 - May 2014
B.S. Information Technology 2014

EMPLOYMENT

K Health, *Full Stack Engineer*, New York, NY   Oct. 2020 - June 2023
- Designed and implemented the React-based user interface for Medical History and Questionnaires, ensuring seamless integration with backend services. Facilitated efficient communication between users and healthcare providers.
- Key contributor to architectural planning for v3 of the Accounts Service, prioritizing speed, ease of development, and bug resistance. Led the development of various v3 functionalities, including reconstructing essential services from v2 and implementing authentication functionality.
- Designed and executed a seamless migration functionality, smoothly transitioning users from the original identity service to the enterprise service with minimal disruption, ensuring a smooth user experience.
- Instrumentally supported the creation of K Health's upcoming React and Storybook-based component library. Collaborated closely with the design team using Figma to craft diverse UI elements, ensuring consistency and efficiency across the platform.
- Gained insights into agile methodologies through shadowing a Technical Product Manager. Developed skills in agile sprint planning, grooming, and retrospectives, contributing to a streamlined and collaborative development process.

Goldman Sachs | inRhythm, *Frontend Software Engineer*, New York, NY   Nov. 2018 - Oct. 2020
- Utilized React and Redux to design and implement the GSenarios securities dashboard for prime services. Emphasized optimizing data presentation and manipulation through the ag-grid library, ensuring efficient table creation and data handling.
- Collaborated with the GS UX-UI toolkit team to enhance GSenarios application usability and effectiveness. Ensured the creation of an intuitive design aligned with best practices in user experience, contributing to a seamless and user-friendly application.
- Key contributor in the Inventory Management team, played a pivotal role in designing and developing the Delphi Inventory Management System. Used a frontend micro-framework to streamline processes, emphasizing efficiency and accuracy in handling inventory data.

The Bacon, *Frontend Web Developer*, New York, NY   Apr. 2017 - July 2018
- Worked on frontend development and redesign of the Bacon platform, connecting service seekers with providers using React and Ruby on Rails.

Greensbury Market, *Jr. Frontend Web Developer*, New York, NY   June 2016 - Mar. 2017
- Expertly implement new features with HTML, CSS, and JavaScript to enhance application functionality and user experience.
- Utilize Shopify, configure external apps for seamless integration with Greensbury, streamlining operations, and boosting customer engagement.
